

Junior Software Developer

- Experienced in enterprise application development and testing, workflow automation, and multi-system integrations using REST APIs and cloud platforms (Microsoft Azure, AWS)
- Skilled in Agile/DevOps environments, translating user stories into technical solutions, validating system functionality, and collaborating with cross-functional teams
- Familiar with SDLC processes, API testing using Postman, defect analysis, and WCAG accessibility practices
- Active ISC2 Certified in Cybersecurity candidate

TECHNICAL SKILLS

Languages:	Python, JavaScript, HTML, CSS, SQL
Frameworks & Tools:	DRF, Flask, FastAPI, FastMCP, Docker, CI/CD
Cloud & Platforms:	Microsoft Azure (SIEM SaaS), Azure DevOps, AWS, Postman, REST APIs, Visio
Databases:	Oracle, PostgreSQL, Redis, Elasticsearch, Qdrant, ChromaDB

WORK EXPERIENCE

AI Engineer Co-op

Jan 2026 - May 2026

Ministry of Public and Business Service Delivery (MPBSDP)

- Engineered a **multi-cloud automation pipeline** integrating **Azure Sentinel** with **AWS Bedrock**, including an Azure playbook that preprocesses incidents and forwards enriched context to the agent, reducing mean time to respond (MTTR) from hours to minutes
- Designed and implemented a **risk-based decision engine** that computes evidence-based confidence scores to trigger automated, policy-controlled account disablement in **Azure Entra ID**, reducing response time for high-risk identity threats
- Architected an end-to-end **SecOps AI agent** on **AWS Bedrock** to automate incident investigation using IP reputation (IPQS), dynamic KQL query selection, and **Azure Log Analytics** via a custom **Azure MCP** server, reducing manual triage effort and increasing investigation depth
- Collaborated with security analysts to **validate workflow requirements**, test integrations, and support implementation of automated enterprise solutions across AWS and Azure systems
- Engaged with school board stakeholders in **requirement-gathering** sessions to identify system gaps and supported post-meeting research to improve enterprise workflow efficiency and security posture
- Built a RAG-based assistant leveraging MITRE ATT&CK and D3FEND to map incidents to adversary tactics and generate evidence based mitigations, improving response accuracy and reducing mean time to acknowledge (MTTA)
- Developed a metadata-driven **KQL query catalog** enforcing analyst-approved queries, preventing unsafe query execution and ensuring consistent, auditable investigation workflows

PROJECTS

AI Code Review & Vulnerability Detection System | [GitHub](#)

April 2026 - Present

LangChain, FastMCP, FastAPI Python, JavaScript, Cloudflare, Qdrant, Docker

- Architected a multi-agent **AI code review** system integrated with **GitHub webhooks** to automatically analyze pull requests, run parallel security checks, and block merges on critical findings, eliminating manual security review overhead
- Built a **vulnerability prioritization pipeline** that integrates CISA's KEV catalog, automatically escalating actively exploited issues to critical severity

- Designed a split-agent security architecture separating dependency (supply chain) and custom code analysis, improving detection accuracy and reducing false positives through domain isolation
- Implemented a **semantic CWE knowledge base** using Qdrant vector search and custom embeddings, enabling code-to-weakness mapping with contextual mitigation guidance
- Developed an orchestration layer with validation gates and webhook deduplication (PR number + commit SHA), ensuring reliable, idempotent execution and preventing false approvals
- Integrated automated PR decisioning and Slack notifications with enriched security context, enabling real-time triage without manual GitHub inspection

Web Recipe Assistant | [GitHub](#)

Python, Django REST Framework, React, Docker, CI/CD

- Built a recipe-sharing web app with user authentication, role-based access, and shopping list generation
- Automated CI/CD pipeline including linting, Docker builds, remote deployment, and Telegram notifications
- Containerized backend and frontend services for easier deployment and maintainability

Microservices-Based Streaming Platform | [GitHub](#)

Python, FastAPI, PostgreSQL, Redis, Elasticsearch, Docker

- Designed a scalable, modular platform simulating Netflix/YouTube architecture with asynchronous APIs for smooth client experience
- Built a recommendation system service integrating user interactions and movie data to deliver personalized suggestions
- Developed ETL pipelines with Elasticsearch indexing and Redis caching to optimize data retrieval and search performance

EDUCATION

Software Engineering, Artificial Intelligence

Sept. 2024 - Present

Centennial College, Toronto, Canada

- Key courses: AI Software Testing & ML/Ops | Software Requirements | Database Concepts | Client-Side Web Development | System Design

Bachelor of Computer Science

Sept. 2022 - August 2024

National Research Nuclear University, Moscow, Russia

- Key courses: C Programming | C++ Programming | Data Structures and Algorithms

EXTRACURRICULAR ACTIVITIES

Chair of Software Engineering Department

Aug. 2025 - Jan. 2026

Engineering Club, Centennial College, Toronto, Canada

Team Leader / Team Coordinator

March 2023

Python Bootcamp, Moscow, Russia

PROFESSIONAL DEVELOPMENT

ISC2 Cybersecurity Certification

[Badge](#) - April 2026 - Present

Python Pro Course | Yandex Practicum (Online)

[Certificate](#) - May 2024
